

YOUR GUIDE TO HOME **EV** CHARGER INSTALLATION

WINDSOR **EV**

ZS **EV**

COMET **EV**

Dear Valued Customer,

Congratulations on choosing your new MG EV!

We are excited to help you get set up with convenient home charging. This guide provides essential information about your home charger installation, including the process, what's included, what might incur additional costs, and what you need to prepare to ensure a smooth process.

Please read this document carefully, and feel free to ask your authorised dealership representative any questions.

1. What's Included in Your Standard Home Charger Installation Package?

The standard home charger installation package may vary depending on the specific model and variant of your MG EV. The standard package includes:

- **Charger Unit:** The supply and installation of [3.3 or 7.4kW] EV home charger unit as per the respective product brochure.
- **Complimentary Wire Length:** The standard package covers the electrical wiring up to the length applicable as per the specific model and variant of your MG EV.
- **Basic Mounting:** Basic mounting of the charger unit on a suitable wall/pillar in the designated parking area.
- **Testing and Commissioning:** Testing and activation of your charger by the installation partner to ensure it is working safely with a brief demonstration and guidance on how to use your charger.

2. Potential Additional Charges (What's NOT Included)

While the standard package covers most common installations, some specific requirements or site conditions may incur **additional charges**. These charges will be clearly communicated to you at the time of survey and must be paid in advance.

- **Extended Wiring:** If your installation requires a wire length exceeding the length approved in standard package, an additional charge per meter will be applicable, which will be communicated by the installation partner after the survey is completed.
- **At the time of survey,** the installation partner would suggest the most efficient route adhering to required safety and electrical guidelines. In case you have any alternate suggestion, you can communicate the same to the installation partner at the time of survey, and the installation partner can evaluate them accordingly. The final decision shall be based on the expertise and opinion of the installation partner.

- **Civil and Electrical Work:** Any necessary civil modifications, such as trenching, concrete work or wall alterations or costs related to upgrading your existing electrical system, including but not limited to:
 - › Main electrical panel upgrades
 - › Wiring upgrades beyond the charger circuit
 - › Establishing or improving the earthing (grounding) system to meet safety standards
- **Permits and Approvals:** You are responsible for obtaining and covering the costs of any local permits, approvals, or inspections required by municipal or electrical authorities in advance for the charger installation.
- **Load Enhancement and Related Charges:** In case of load enhancement, the responsibility for all expenses, local permits, approvals, or inspections related to enhancement, including modifications to input/output cables and the electricity meter, will be with you.

3. Prerequisites for Installation

To ensure a smooth and timely installation, please ensure the following prerequisites are met:

- **Adequate Electrical Load Provision/Enhancement:** Your home must have sufficient spare electrical load capacity to support the charger. In case the spare load is not available, load enhancement from electricity utility provider to be done accordingly.
 - › 3.3kw AC Charger/Smart Socket: Requires a spare power load of 3.3kw.
 - › 7.4kW AC Fast Charger: Requires a spare power load of 7.4kw
 - › Please check your recent electricity bill to assess your available load and share with your respective authorised dealership team and installation partner.
- **Earthing (Grounding):** A proper and effective earthing (grounding) system is mandatory for safety. It is important to maintain the Neutral-to-Earth (NE) voltage within permissible limits - ideally below 2V, to ensure the safe operation of the charger.
- Please note that the above list is indicative and not exhaustive. The exact scope of work (SOW) will be determined based on specific site conditions during the survey and communicated to you by the installation partner upon survey completion.

4. Home charger installation process

- Initial Discussion:** Your authorised dealership representative will discuss your installation needs and this policy with you.
- Site Survey and Quote**
 - › Our authorised charger installation partner will contact you to schedule a site survey (feasibility study) at your home or office.
 - › During the survey, installation partner will assess the electrical setup and installation feasibility requirements and provide an approximate quote for any additional charges related to additional cable length if any. This quote will be provided after the survey is completed.
 - › During the survey, your electrician to be present at the site who can address the surveyor's queries related to electricity main panel, electricity meter and other related queries to the electrical matters.
- Your Approval and Payment:** You will have to make advance payment for the additional cable length charges or any other additional work that you might be getting done from the installation partner. Installation will not proceed without this.
- If you've opted for the charging unit as an accessory,** please check the pricing of the same from your respective authorised dealership and ensure payment.

- E. Scheduling:** Once approved, the installation partner will coordinate with you to schedule the installation at your convenience. If you have completed the scope of work (SOW) as outlined in the survey, please share the relevant photos and documents directly with our installation partner as per the communicated requirements.
- F. Installation and Handover:** The installation partner will perform the installation, test the charger, and guide you on its basic operation.
- G. Accurate Contact Information and Installation Address:** Please ensure that the correct and complete phone number, email address, and home charger installation address are shared with your authorised dealership and the installation partner. This will facilitate smooth and efficient communication regarding your installation

We are committed to providing you with a seamless and efficient home charging experience.

Thank you for being a part of the MG EV family!

For any questions or assistance, please contact your authorised Dealership Representative or MG Pulse Hub at 1800 - 1006464.

FREQUENTLY ASKED QUESTIONS

• What is the warranty on charger unit and charges for its maintenance?

The charger unit comes with standard warranty as mentioned in the warranty card that comes with the charger unit. The warranty starts from the date the charger is commissioned. After the warranty period, you will have the option to purchase an Annual Maintenance Contract (AMC) from the charger manufacturer. In case AMC is not in place after the warranty expires, standard service charges will be applicable.

• What is the warranty on charger installation service?

The installation service for your charger is covered by a 6-month warranty. This is subject to no tampering or no external damage on the installation performed by the installation partner.

• What is the estimated time for charger installation?

Please note that the total time for your charger installation can vary on a case-to-case basis depending on the specific work required, as determined during the site survey, and the time needed to finalise and approve the scope of work (SOW). The turnaround time may also be impacted due to the distance of the installation site from the respective authorised dealership. For installations located further away, please expect a potentially longer timeline. The installer will aim to complete your installation as efficiently as possible while ensuring safety and quality.

- **I do not want to install charger now. How long do I have to request the charging installation service?**

The standard home charger installation service is applicable only for a period of one (1) year from the date of delivery of your MG EV. Please ensure you initiate and complete the installation process within this time frame.

- **What happens if I cancel my vehicle booking after the charger has been installed?**

If you choose to cancel your vehicle booking after the home EV charger has been installed at your premises, the cost of the complete standard home charger installation package will be deducted/recovered from any eligible booking amount refund. This is due to the irreversible nature of the installation and the costs incurred.

- **What if my installation site is not found suitable for the charger installation?**

The installation of your home EV charger is subject to a site feasibility assessment conducted during the survey. If your installation site is deemed non - feasible due to reasons such as electrical limitations, structural issues, safety concerns, or if the agreed-upon scope of work (SOW) is not completed as per the standard requirements shared by the installation partner, the charger installation cannot proceed. Our installation partner will explain the reasons for any non - feasibility to you. In such an instance, you may provide an alternate site for evaluation (if available).

- **Can the installation be refused or postponed by the installation partner?**

Yes, it is our priority to ensure installation of your home charger with safety and adherence to electrical standards. Therefore, the installation partner reserves the right to refuse or postpone the installation if, during the site survey or the installation process, your premises are found to be unsafe, do not meet the required electrical or structural standards, or if the necessary prerequisites shared during the feasibility study are not adequately met. Any issues identified will be communicated to you, and potential solutions, if possible, will be discussed.

- **Can I purchase an additional charger or request services like reinstallation or relocation?**

The standard installation package includes one charger unit and a one-time installation at the initially agreed-upon installation site. If you require an additional charger, or services such as re-installation, relocation of the existing charger, or any other non-standard installation needs, these can be purchased separately as accessories or services at applicable charges. Please contact your authorised dealership or the installation partner for pricing and availability.

- **What happens if the wiring needed for my installation is shorter than the complimentary length included in the package? Do I get to keep the extra wire or receive any compensation for it?**

Please note that if your installation requires a wire length shorter than the standard wiring length specified in your installation package, any unused portion of the wire will not be provided to you separately, either as physical material or in any form of monetary value or equivalent. The standard package is designed to cover typical installations up to a certain length.

- **Can I get the charger installed from my side through any local electrician?**

It is strongly recommended to have the charger installed by MG authorised installation partners. This ensures the installation meets all safety standards and warranty requirements, and that your charger functions optimally with your vehicle. Please note that any issues arising from faulty installation by an unauthorized third party may impact the warranties on your vehicle and/or your charger. MG or its authorized dealership will not be liable for any damage incurred.
